DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-14 and 19-33 in the reply filed on 1/3/2007 is acknowledged.
2. Claims 15-18 and 34-54 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/3/2007.

Specification

3. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1, 2, 13 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Nishiwaki et al. (U.S. Publication No. 2006/0164204 filed 9/12/2003).

Nishiwaki shows the method as claimed in Figs. 1A-3 in corresponding text as: a semiconductor substrate (1); a magnetic impedance device for detecting a magnetic field wherein the magnetic impedance device (7 and 8) is disposed on the substrate [0043] (claim 1). Nishiwaki teaches that a periphery circuit (bridge circuit) for processing an output signal outputted from the magnetic impedance device wherein the periphery circuit is disposed on the substrate [0042] (claim 2). Nishiwaki teaches that an oxidation protection film (5) disposed on the magnetic impedance device [0048] (claim 13). Nishiwaki teaches that the oxidation protection film is made of silicon oxides, silicon nitrides, or composite film of silicon oxides and silicon nitrides, [0048] (claim 14).

Allowable Subject Matter

6. Claims 3-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. Claims 19-33 are allowed.
